

L-SERIES

REVERSE CYCLE SPLIT SYSTEM

Energy efficient, quiet and reliable.

Daikin L-Series is an energy efficient split system to cool or heat your home. With its advanced and innovative technology, the L-Series has many economical features, with a full range available, offering reliable and flexible solutions to suit any room.

25 class model

INVERTER POWERFUL OPERATION

Push the POWERFUL button on the remote control and you'll be relieved with a cooling or heating boost for a 20 minute period, even if the unit's already operating at high capacity.

INTELLIGENT COMFORT

An intelligent infrared human presence sensor that automatically enables energy saving operations if the room is unoccupied for 20 minutes.

AUTO FAN SPEED

An optimal fan speed is automatically selected to suit the set temperature for a more efficient operation.

COMFORT MODE

Airflow direction is optimised such that airflow is streamed upwards during cooling to prevent cold airflow being blown onto the body and downward during heating to drive warm air towards the floor of the room.

ECONO MODE

Helps reduce power consumption and reduces the load on the electrical circuit when multiple devices are used simultaneously.

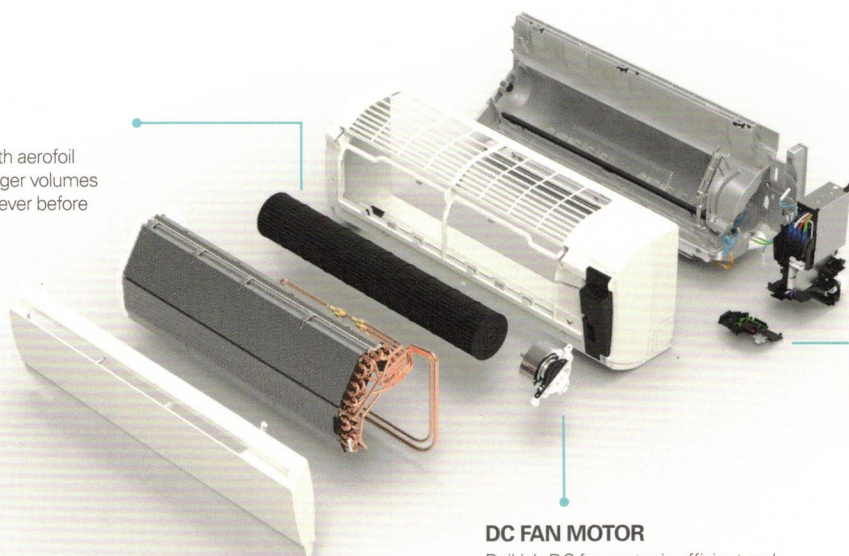

AIR PURIFICATION

Each model is fitted with a titanium apatite deodorising air purification filter that traps microscopic particles, decomposes odours and even deactivates bacteria.

TECHNOLOGY

CROSS FLOW FAN

Large diameter rotor with aerofoil blade design delivers larger volumes of air more quietly than ever before

PROGRAM DRY FUNCTION

When operating in this mode, the microprocessor intelligently adjusts temperature and air flow rate to suitable levels for maximum humidity elimination with minimal compromise to comfort.

INTELLIGENT EYE

If no movement is detected for a period of 20 minutes, the air conditioner adjusts the set temperature by $\pm 2^{\circ}\text{C}$ to save energy.

DC FAN MOTOR

Daikin's DC fan motor is efficient and compact, with five step fan speeds including quiet and auto mode.
